Dear Sir, Madam,

I would like to apply for the invitational internship and work for the research project of the Doctor Carlos Moreno Garcia about natural language processing to assess data discovery.

I am currently studying to obtain a two years diploma in IT studies at the Institute of Technology in Blagnac (France).

The subject is interesting because it is related to the medical field, and the research could be helpful in the future. As I want after my graduation, to study in an engineering school called ISIS (computer science and information systems for health) in Castres (France), I think it is a great opportunity for me to work in a project related to computer science and health.

I have never worked on a systematic review program, but it's an interesting topic that can be applied in various fields.

Also, going abroad will help me improve my English skills and will be a great experience overall.

Thank you for your time, I am looking toward your response.

Faithfully,
Sutarik Agathe
